Frameworks & Technologies: React, Redux, Flask, Django, Salesforce Commerce Cloud, Salesforce Loyalty Management, WordPress, Android Development
Tools & Platforms: Git, GitHub, Google Cloud Platform, Agile/Scrum, REST APIs, CMS Platforms
Additional Skills: Communication, Technical Documentation, Debugging & Troubleshooting, UI/UX Implementation, Cross-Functional Collaboration, Content Management

PROFESSIONAL EXPERIENCE

Full Stack Web Developer | Groupe Dynamite Inc. | Montreal, QC (Remote) March 2022 – 2024

- Built extensive front-end of a new loyalty program, and integrated the back-end with 3rd party system.
- Delivered feature enchantments, production support, and bug-fixes within an Agile scrum team.
- Wrote an email & phone number verification API to support online and in-store customer data validation, hosted on Google Cloud Platforms.
- Fixed production issues and averted emergencies by troubleshooting for configuration and code issues.
- Modernized old code and updated scripts from third-party contributors to match company's standards.
- Wrote and maintained extensive documentation for other developers and the broader team.
- Participated in code review to maintain standards and team retros to improve processes.

Web Developer & Podcast Producer | Centre for Inquiry Canada | Ottawa, ON | 2020 – 2022

- Led redevelopment of the organization's WordPress website, including development environment setup and implementation of modern design improvements.
- Worked directly with stakeholders to gather requirements and translate business needs into technical solutions.
- Maintained website functionality, content updates, and platform enhancements.
- Produced and launched a successful organizational podcast, publishing over 60 episodes.
- Provided technical training, documentation, and ongoing support for staff members.
